Why VOLT?

Critical Need

After decades of underfunding, the U.S. grid requires substantial upgrades to keep pace with rising demand, which is expected to catalyze further public and private sector investment.

High Growth Potential

U.S. electricity demand is forecast to rise 78% by 2050,¹ reflecting increasing AI workloads, data center expansion, and EV adoption, among other drivers.

Investment Expertise

VOLT is actively managed by a seasoned investor with decades of experience analyzing and selecting companies at the forefront of this theme.

Fund inception date: 12/03/2024. The performance data quoted represents past performance. Past performance does not guarantee future results. The investment return and principal value of an investment will fluctuate so that an investor's shares, when sold or redeemed, may be worth more or less than their original cost and current performance may be lower or higher than the performance quoted. Brokerage commissions will reduce returns. As stated in the current prospectus, the expense ratio for VOLT is 0.75%. **For performance data current to the most recent month-end visit temaetfs.com/VOLT.** Short term performance, in particular, is not a good indication of the fund's future performance, and an investment should not be made based solely on returns. The S&P MidCap400® provides investors with a benchmark for mid-sized companies. It is designed to measure the performance of 400 mid-sized companies, reflecting the distinctive risk and return characteristics of this market segment.

Please see website for complete holdings information. Holdings are subject to change. Region Breakdown relates principally to the domicile of the issuers of the securities held in the ETF. Sector Breakdown is based on the Global Industry Classification Standard (GICS). Element Breakdown is based on Tema's internal research elements and portfolio company classification.

Carefully consider the Fund's investment objectives, risk factors, charges and expenses before investing. This and additional information can be found in the Fund's prospectus or summary prospectus, which may be obtained by visiting www.temaetfs.com. Read the prospectus carefully before investing.

Important Risks: Diversification does not ensure profits or prevent losses. Investing involves risk including possible loss of principal. There is no guarantee the adviser's investment strategy will be successful.

Sector Focus Risk: The Fund may invest a significant portion of its assets in one or more sectors, including Industrials, Materials and Utilities, and thus will be more susceptible to the risks affecting those sectors than funds that have more diversified holdings across several sectors. Electric companies require extensive investment in capital improvements and additions, including the construction of additional transmission and renewable generation facilities, modernizing existing infrastructure, installation of environmental upgrades and retrofits as well as other initiatives. Electric companies may provide services at rates approved by one or more regulatory commissions. If these regulatory commissions do not approve adjustments to the rates charged, affected electric companies may not be able to recover the costs associated with their investments. This could negatively impact profitability and impact the performance of the Fund.

In addition, many materials companies are significantly affected by the level and volatility of commodity prices, exchange rates, import controls, worldwide competition, environmental policies and consumer demand. Investing in foreign and emerging markets involves risks relating to political, economic, or regulatory conditions not associated with investments in U.S. securities and instruments. In addition, the fund is exposed to currency risk.

ETFs are bought and sold at market price (not NAV) and are not individually redeemed from the Fund. Total Returns are calculated using the daily 4:00pm EST net asset value (NAV). Market price returns reflect the midpoint of the bid/ask spread as of the close of trading of the exchange where Fund shares are listed. Market price returns do not represent the returns you would receive if you traded shares at other times.

Tema ETFs LLC serves as the investment adviser to Tema Electrification ETF (the "Fund"), and Tidal Investments LLC serves as a sub adviser to the Fund. The Fund is distributed by Vigilant Distributors, LLC, which is not affiliated with Tema ETFs LLC nor Tidal Investments LLC. Check the background of Vigilant Distributors, LLC on FINRA's BrokerCheck.

Implied Liquidity: ETF Implied liquidity is a representation of how many shares can potentially be traded daily in an ETF as portrayed by the creation unit. This is defined as the smallest value of the IDTS (Implied Daily Tradable Shares) for each holding in the creation unit.

Active Share: measure of the difference between a portfolio's holdings and its benchmark index.
